NEW DELHI

October, 2008

To,

The Nobel Foundation,
Sturegatan 14, Stockholm,
Sweden.

Dear Sir,

**Subject: Nomination for Nobel Prize in Medicine and
Physiology to Dr. Sunita Agarwal for her work on DNA
amplification with MANA**

From our country comes an eye surgeon with a scientific break through Dr. Sunita Agarwal. Her lifetimes work has been on DNA with her unique formulation called MANA which when mixed with human plasma amplifies the DNA and can be used for gene therapy.

The patient's peripheral blood and plasma extracted from it is mixed with MANA both the fluids passed through a 0.2 micron filter in seconds huge pieces of human DNA can be seen through the microscope. This has been further researched by international agencies and thus validated to be human DNA of the same patient. This fact that DNA is amplified many times over is an Indian scientific break through brought to the world through your esteemed agency.

I here by nominate her name for the noble prize for the coming year. Enclosed is the scientific paper on the same.

Please send me an acknowledgement on receipt of this nomination.

With kind regards,

Yours sincerely,

(Oscar Fernandes)
